ABSTRACT

This research used the vanBasko Karaoke as an educational inovation to help student teachers teach singing. Student teachers were taught how to use the karaoke before using it in the teaching and learning of music in the classroom. The research findings indicate that school children were able to follow tempo of songs and singing melodies more accurately using the vanBasko Karaoke. Music student teachers were able to help school children become more creative during singing. The karaoke singing activity had made the classroom environment more informal as well as allowing school children to feel more comfortable and wanting to play an active role during learning.
